

IILM UNIVERSITY, GREATER NOIDA

INTERNSHIP REPORT PRESENTATION

AI Deployment & Automation

Virtual Internship

AICTE - EduSkills Virtual Internship Program | Project: AI Resume Analyzer

Saanvi Saxena

Roll No. 2410030492 | B.Tech CSE

July - August 2026

IILM UNIVERSITY
GREATER NOIDA

Saanvi Saxena

B.Tech - Computer Science & Engineering

ABOUT THE STUDENT

Candidate profile

- **Roll Number**
2410030492
- **Institute**
IILM University, Greater Noida, U.P.
- **Programme**
B.Tech CSE, Batch 2024-2028
- **Internship Domain**
AI Deployment & Automation
- **Duration**
8 Weeks | July - August 2026

EduSkills and AICTE

EduSkills is a non-profit that runs virtual internship programmes for engineering students in India, working with colleges and industry partners. The internships run under the AICTE - EduSkills Virtual Internship Program, in partnership with the All India Council for Technical Education and its National Internship Portal. Each cohort follows a week-wise plan on the EduSkills portal: a module a week, quizzes and assessments along the way, project work to submit, and a final assessment test that sets the grade.

AICTE Patronage

Run under the AICTE National Internship Portal. An offer letter at the start, a credential at the end.

Week-wise Structure

A new module each week, with quizzes, assessments and project work to submit.

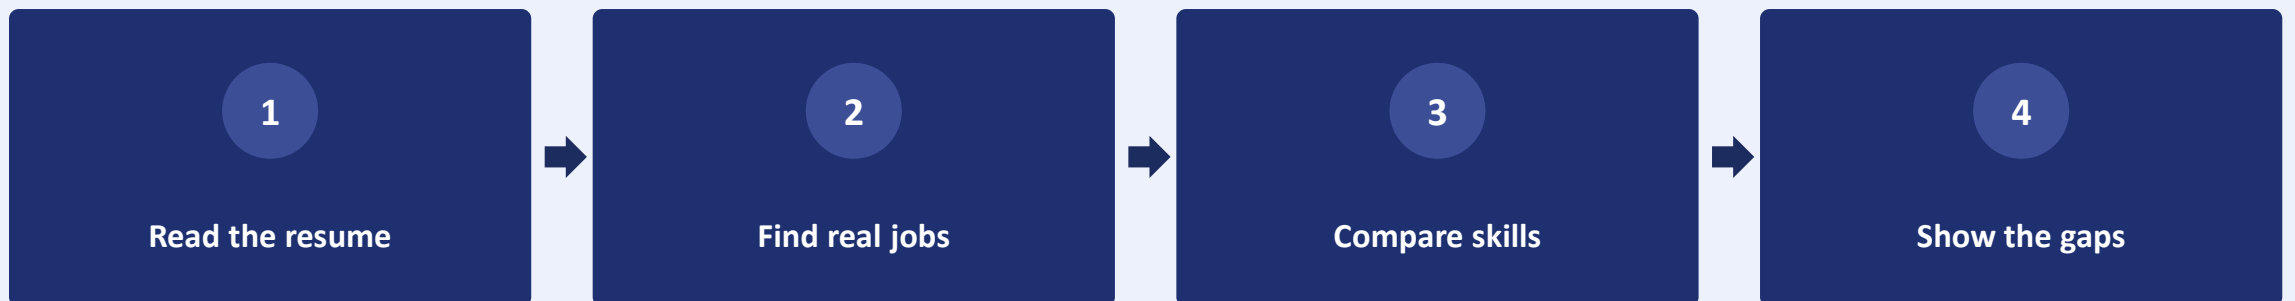

EduSkills Portal

Modules, assessments and the certificate all live in the student account.

Why a candidate cannot do this by hand

There are far more job openings than anyone can actually sit down and read. Going through every job description and checking it against your own resume works for five jobs; it does not work for five hundred. And when an application is rejected, no one tells you which requirement you missed, so you never find out which skill is holding you back.

So the system does that reading for you:

What the system has to do

Take the resume in

PDF, DOC or DOCX. Rejected early if the file has no readable text.

Build the candidate profile

Skills, education, experience and projects, taken only from what the resume actually says.

Find real job listings

Apify scrapes live postings, and each one is read for what it asks for.

Compare and score

Requirements measured against the profile, using a scoring rule that is written down.

Show the skill gaps

Matched, missing and related skills kept separate, with what to learn first.

Deploy it properly

Containerised and run using the methods taught in the internship.

Tools used in the project

n8n

Runs the workflow. Takes the input, calls each stage in turn, returns the result.

Large Language Model

Reads resumes and job descriptions the way they are actually written.

FastAPI

The backend service that does the scoring, so the same input always gives the same number.

RAG

Holds the extracted resume and a small set of related-technology entries, searched during matching.

Docker

Packages the service so it runs the same anywhere.

Apify

The scraper used in this project. Pulls job listings, with full descriptions, from whichever site is needed.

How the system fits together

- 1 Input Layer** Resume uploaded in PDF, DOC or DOCX form and converted to plain text
- 2 Orchestration Layer** The n8n workflow validates the input and runs each stage in order
- 3 Analysis Layer** The Resume Analysis Agent builds a structured candidate profile
- 4 Retrieval Layer** Apify scrapes the job listings, which the Job Analysis Agent then reads
- 5 Matching Layer** A containerised FastAPI service scores the profile against the requirements
- 6 Output Layer** The compatibility report is returned to the user

What each week covered

1 WEEK

Deployment Foundations & FastAPI

AI lifecycle, production readiness and model serving with FastAPI

2 WEEK

Containerization & CI/CD

Docker architecture, Dockerfiles, volumes and CI/CD for ML workflows

3 WEEK

Cloud & Generative AI Serving

SageMaker, Vertex AI, Azure ML, LLM serving and quantization

4 WEEK

AI Agents & Automation

Agents with LangChain and LlamaIndex, and automation workflows

5 WEEK

Integration, Security & Compliance

Integrating AI into apps, securing systems, privacy and bias

6 WEEK

Kubernetes & Observability

Container orchestration, monitoring and logging in production

7 WEEK

Optimization, Drift & Advanced RAG

Performance tuning, cost control, drift detection and RAG

8 WEEK

Applied Projects & Capstone

Case studies, full-stack RAG apps and an end-to-end AI solution

What the project produces

- A pipeline that takes a resume and returns a compatibility report against real job listings
- A score you can trace back to the exact requirement that produced it
- The same resume and the same listing always give the same number, because the score is worked out in code
- Matched, missing and related skills kept separate, with what to learn first
- A backend service that behaves the same on any machine
- Hands-on experience of deploying an AI application: API, container, workflow, monitoring

CERTIFICATION

Internship completed

Certificate ID

2026-595A888026

Date Issued

27 August 2026

AICTE Student ID

STU699828db808d31771579611

Duration

8 Weeks | July - August 2026

Internship Credential, AI Deployment & Automation

Thank You
